

VERITAS®

SCHMETZ INSIDE

VERITAS Laura - Just get started

The VERITAS Laura is very easy to use, because the important functions are simply selected by two rotary knobs: 9 stitch programs, 1-5mm stitch length and also the 4-step buttonhole program. The thread trimmer and the reverse sewing button simplify sewing.

Strong style, great performance

Although our first impression of a sewing machine is what it looks like on the outside, the interior features are much more important, and this is where the VERITAS Laura demonstrates its many advantages. A powerful motor lurks under the chic housing which will be your reliable partner for a range of sewing projects.

The thickest coat material or double layer jeans are no problem for the Laura; this sewing machine can sew seams at up to 750 stitches a minute with very low vibration. You can select from nine different stitch programmes, with the thread tension automatically maintained at the optimal level for each programme. Press the reverse stitch button and seams are so quick and easy!

Everything on board

If you have a job to do, don't waste time searching for the tools like a bobbin for the thread, scissors or a replacement needle, because the VERITAS Laura has all the elements on board to enable you to start sewing straight away. And always close to hand in the practical compartment in the base of the sewing machine. This means that various accessories, i.e. seam separators etc., are always there when you need them, and you can then put them back without leaving an untidy mess on your working area.

The accessory box has enough space for additional sewing feet for special applications, i.e. blinds and quilting.

The focus on the essential

Thanks to its simple operation and the accessories provided, even beginners will experience quick success in sewing and can let their creativity run wild.

- Second spool pin

L A U R A

A revolution in academic circles

Laura Bassi was the first woman to be awarded the title of professor, initially for philosophy and then for physics. Her extraordinary gifts became apparent even when she was a small child, and she was privately educated in natural sciences. She was eventually allowed to lecture at the University of Bologna for the first time in 1732, and was the first woman to enter a domain that had hitherto been the exclusive preserve of men.
